

Pflegeanleitung ***Care Instructions***

RAY **daytona**

Motorradstiefel . Motorcycle Boots
Made in Germany. By Hand.

Congratulations!

You have made the right decision. When the only thing that counts is quality, choose daytona®:

- selected first-class raw materials
- manual manufacturing, exclusively in Germany, using state-of-the-art technical equipment
- sophisticated safety features
- extraordinary wearing comfort on and off the bike
- durable even in extreme situations
- easy to clean products
- an excellent repair service using only original parts

You also can say it in short like Günter O. from Mengen, Germany:

„Pretty fine, that there is daytona!!! I have worn my boots for 10 years now, without any defect, really wicked!“

Our customers are full of praise for the daytona® brand, to be able to tell a similar story you should keep in mind the following rules:

The proper products

> Feed the leather

daytona® Spezial leather care (75 ml) prevents drying out while providing an excellent barrier to all riding conditions.

Application: We recommend you to treat your boots with daytona® Special Leather care before wearing them for the first time. Apply the polish and then buff with a soft cloth. Repeat this regularly and always remember to clean your boots after use.

> Smooth-running zippers

The zipper spray **daytona® Turbo Grease** (100 ml) Exclusively developed for daytona®. Teflon parts minimize friction resistance of zipper slide. It will remain smooth-running and dirt-resistant.

Application: Spray on lightly to zipper, activate zip to coat runners then wipe off any excess.

> Black leather repair cream

daytona® Black refresh (50 ml) provides a fresh look to worn and slightly scratched black smooth leathers. It will also cover any small surface scratches. Contains no solvents.

Application: Remove dust and dirt. Apply cream thin and evenly allowing sufficient time to dry, then polish with brush or cotton cloth.

> **Waterproof treatment**

daytona® Water Stop

(200 ml) is recommended by daytona® for boots with a GORE-TEX® membrane. The highly effective foam treatment is also ideal for all textile materials to fully preserve the breathability and to provide additional protection.

Application: Remove dust and dirt. Pump the foam on a sponge and apply to the leather. Leave overnight to dry. Afterwards polish smooth leather

with a soft cloth, rough up suede with a soft brush.

Care Tips and Basics

- Leather is a natural material. It needs to be cared for to keep its elasticity. Pigment marks, vein lines or little variations in width and colour are considered normal.
- The base material is raw cow or calf hide of about 5 mm which has been preserved and made durable and water resistant in the tanning process. This water resistant (or hydrophobic) effect has to be renewed regularly through special boot care.
- **Never dry wet boots by putting them on the heating or by exposing them to direct sun light.**
- The best way to dry wet boots is at room temperature on a shoe tree (with the sole uppermost) or stuff them with newspaper.
- **Do not clean dirty boots with a high-pressure cleaner – the leather properties may be damaged.**
- Clean your boots from road dirt and dust with an appropriate brush or cloth.
- When cleaning your **boots with GORE-TEX®** use products with low oil content otherwise the breathability of the membrane could be dramatically reduced. We recommend daytona® Special Leather care, Black refresh and Water Stop.
- Regularly treat your boots with daytona® Water Stop to prevent the leather from becoming soaked. Dry upper material keeps you warmer!

Where can you get the basic equipment?

Ask your authorized daytona® dealer for original daytona® care products – the right basis for a long boot life cycle. For a complete list of dealers see www.daytona.de.

- * Certainly the products on the title page are suitable only for boot care and not for body care.
